

Systematically Evaluate Your Security Posture

Security Assessment

Examine the effectiveness of existing security controls, systems, and practices to identify gaps, weaknesses, or non-compliance with standards.

Proactively Reveal and Remediate Security Gaps

Undiscovered gaps in an organization's infrastructure create entry points for attackers, leading to data breaches, ransomware attacks, and significant financial losses. **This service provides organizations with a snapshot of their security posture to ensure their security controls are in place and functioning effectively so that they don't operate with blind spots.**

Validate Controls

Check to see if your existing security controls, such as firewalls, intrusion detection systems, and endpoint protections, are functioning as intended. This assessment verifies their effectiveness in mitigating threats and identifies areas that need improvement.

Uncover Blind Spots

Reveal hidden vulnerabilities and overlooked weaknesses in your systems, processes, or configurations that attackers could exploit. By identifying these blind spots, you can address risks before they lead to a security incident.

Align with Standards

Adhere to regulatory demands while also benchmarking your security posture against industry best practices. This alignment not only helps achieve compliance but also ensures your security strategy reflects the latest and most effective practices for minimizing cyber risk.

Account Management

Measure your security maturity against globally recognized standards.

CIS-Based Evaluation of Your Environment

This assessment evaluates your environment against the Center for Internet Security (CIS) controls, which are globally recognized best practices in cybersecurity. These prioritized measures help safeguard your systems, data, and networks from evolving cyber threats. By aligning with CIS benchmarks, you can standardize security protocols, minimize vulnerabilities, and achieve compliance with relevant regulations.

Detailed Report with Actionable Insights

You'll receive a comprehensive, easy-to-understand report detailing identified vulnerabilities, their potential impact, and prioritized steps to mitigate them. The report includes tailored recommendations aligned with industry best practices to help you address critical risks efficiently, allocate resources effectively, and build a more secure and resilient environment.

Overcome Common Challenges

Unknown Vulnerabilities

Many companies operate with unpatched systems, misconfigured software, or outdated security measures that often go unnoticed until exploited. Our security assessment uncovers these issues so you can address them.

Obtaining Cyber Insurance

Insurers are increasingly requiring robust security measures for coverage eligibility, but companies may struggle to meet these requirements. Security assessments verify whether controls meet insurance benchmarks and provide documentation to support policy renewals or claims.

False Sense of Security

Organizations often assume their tools and strategies are effective, leaving them exposed when these measures fail against sophisticated attacks. An assessment validates the performance of existing defenses, uncovering gaps and providing actionable recommendations for improvement.
